Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Specification

1. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," "There is provided", etc.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-8 are rejected under 35 U.S.C. 102(e) as being anticipated by WO03042022. WO ' 022 shows a crawler frame for a construction machine having a center frame 12 and right and left track frames 21 disposed on the right

Art Unit: 3671

and left sides of the center frame so as to extend in a back and forth direction, wherein the center frame comprises a central frame section and legs 30/31 for connecting the central frame section to the track frames, and the legs are formed from cast steel.

As concerns claim 2, WO ' 022 shows the legs of the center frame have a tubular shape and the top faces of the legs are convex in cross-section (figure 1).

As concerns claim 3, WO ' 022 shows the legs of the center frame are in the shape of a cylindrical pipe having a circular cross-section (figure 2).

As concerns claim 4, WO ' 022 shows a joint flange section 126 joined to the central frame section is provided at the inner end of each leg and a joint flange section joined to a said track frame is provided at the outer end of the leg (figure 21).

As concerns claim 5, WO ' 022 shows the joint surfaces of the joint flange section at the inner end of the leg and the central frame section and/or the joint surfaces of the joint flange section at the outer end of the leg and the track frame are flat faces (figure 21).

As concerns claim 6, WO ' 022 shows the legs are inner end to the outer respectively gently widened from the end (figure 21).

As concerns claim 7, WO ' 022 shows a joint flange section 126 joined to the central frame section provided at the inner end of each leg and a joint flange section joined to a said track frame is provided at the outer end of the leg (figures 21 & 23).

As concerns claim 8, WO ' 022 shows a joint flange section construction machine joined to the central frame section is provided at the inner end of each leg and a joint flange section joined to a said track frame is provided at the outer end of the leg (figure 23).

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
